Software Developer with 2+ years of experience building scalable SaaS applications, internal tools, and client-facing platforms using React, TypeScript, and Tailwind CSS. Experienced in developing dashboards, ATS systems, and API-driven interfaces, with hands-on experience building production RAG-based and agentic Generative AI applications.

TECHNICAL SKILLS

JavaScript (ES6+) | React.js | Next.js | TypeScript | Tailwind CSS | Redux Toolkit | Express.js | REST APIs | SQL Server | Azure Blob Storage | Python | LangChain | LangGraph | OpenAI | FastAPI

EXPERIENCE

Software Developer – ST Global Tech | Dec 2023 – Present

- Built and maintain a full-stack Applicant Tracking System (React, TypeScript, Express, SQL Server) managing 8000+ candidate profiles and 30+ clients, used daily by 10+ internal recruiters.
- Implemented Role-Based Access Control (RBAC) with client-specific data filters to enforce compliance and data visibility restrictions across accounts.
- Built a bulk resume upload feature supporting up to 500 resumes at a time, integrated with Azure Blob Storage, and architected a talent pool module for searching and managing candidates across clients.
- Automated candidate billing by building a full-stack invoicing and reporting system, replacing manual Excel/Word processes and reducing invoice generation time by an estimated 70% per billing cycle.
- Rebuilt the company website from scratch (React, TypeScript, Tailwind, Express), migrating from a static Bootstrap site and improving Core Web Vitals through lazy loading and asset optimization.
- Developed and integrated RESTful APIs into a Next.js travel booking platform, resolving data synchronization failures and improving booking data reliability for end users.
- Developed the frontend for a Learning Management System (React, TypeScript, Tailwind) serving 30+ active learners.

Freelance | Jan 2023 – Dec 2023

- Built and shipped a production-ready marketing website for Mavlead (React, TypeScript, Tailwind, Express), translating Figma designs to pixel-perfect implementation across 3+ client feedback cycles.
- Built the frontend from scratch for Realigno, a multi-tenant project management SaaS (React, TypeScript, Ant Design), while guiding a junior developer through component patterns and implementation.

PROJECTS

DocuMind — [documind-delta.vercel.app](#) | [GitHub](#)

- Built a production-ready full-stack RAG application where users upload PDFs and query them via an AI chat interface with inline citations and real-time token streaming over SSE, using LangChain, PG Vector, and FastAPI.
- Engineered a scalable async system (FastAPI, Neon DB, React) with an end-to-end RAG pipeline (parsing, semantic chunking, embeddings, vector retrieval), JWT and Google OAuth auth, and multi-tenant data isolation, deployed on Render and Vercel.

Provenance — [provenance-red.vercel.app](#) | [GitHub](#)

- Built a full-stack agentic research assistant where a LangGraph agent plans sub-questions, searches the web via Tavily, and writes cited reports, streaming its live reasoning to the UI over SSE, using LangChain, OpenAI, FastAPI, and Next.js.
- Designed a human-in-the-loop review gate with durable pause/resume via a Postgres checkpointer (approve/edit/reject), secured the API with Google OAuth, JWT, and rate limits to control LLM spend, and added LangSmith tracing for observability.

EDUCATION

B.Tech in Information Technology (77%) | College of Engineering Roorkee | 2018 – 2022

ACHIEVEMENTS

- Delivered an LMS project 2 weeks ahead of schedule, recognized for collaboration, technical ownership, and problem-solving.
- Runner-up, Zonal round of IITB Techfest (2019–20); 2nd runner-up in College Hackathon and 1st runner-up in SIH Internal Hackathon.
